Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of configuring a programmable pump for delivering an agent to a patient, the method comprising:

generating a user interface having a plurality of pages, at least one of the pages

being a home page, the home page being a starting page for the user

interface on the pump;

retrieving at least one banner from memory; and

displaying the retrieved at least one banner in the home page.

2. (Original) The method of claim 1 wherein retrieving a banner includes retrieving a banner identifying the programmable pump as an insulin pump.
3. (Original) The method of claim 1 wherein retrieving a banner includes retrieving a banner containing information identifying the user of the programmable pump.
4. (Original) The method of claim 1 wherein retrieving a banner includes retrieving a banner containing medical information specific to the user of the programmable pump.
5. (Original) The method of claim 1 wherein retrieving a banner includes retrieving a banner identifying the caregiver for the user of the programmable pump.
6. (Original) The method of claim 1 wherein two or more of the pages generated by the user interface are home pages, further wherein:

retrieving at least one banner from memory, includes retrieving two or more

banners from memory; and

displaying the retrieved at least one banner in the home page, includes displaying
at least one banner one of the home pages and at least one banner on
another of the home pages .

7. (Original) The method of claim 1 wherein the programmable pump is in data
communication with a computer, the method further comprising:

entering the at least one banner into the computer;

downloading the at least one banner from the computer to the programmable
pump; and

loading the at least one banner from memory onboard the programmable pump.

8. (Currently Amended) A pump for delivering insulin, the pump comprising:

memory, the memory storing a user-defined banner;

a screen; and

a processor in data communication with the memory and the screen, the processor
programmed to retrieve the banner from the memory and display the
banner on the screen, wherein the banner identifies the pump as an insulin
pump.

9. (Original) The pump of claim 8 wherein the banner contains information identifying
the user of the pump.

10. (Original) The pump of claim 8 wherein the banner contains medical information
specific to the user of the pump.

11. (Original) The pump of claim 8 wherein the banner identifies the caregiver for the
user of the programmable pump.

12. (Original) The pump of claim 8 wherein the memory stores two or more banners and the processor is programmed to:

generate a user interface, the user interface having a plurality of pages, at least two of the pages being a home page; and display at least one banner in one home page and at least one other banner in another home page.

13. (Original) The pump of claim 8 further comprising a data port, the processor being configured to receive a banner through the data port and store the banner in memory.

14. (Original) The pump of claim 13 further comprising a computer, the computer programmed to receive a banner through an input device and to download the banner to the pump.

15. (Currently Amended) A pump for delivering insulin, the pump comprising:

a data port;

memory;

a screen;

a processor in data communication with the data port, the memory, and the screen,

the processor programmed to (a) generate a user interface having a plurality of pages, at least one of the pages being a home page, the home page being a starting page for the user interface on the pump, (b) retrieve a banner from the data port, (c) store the banner in memory, and (d) display the banner in the home page.

16. (Currently Amended) A pump for delivering insulin, the pump comprising:

a data port;

memory, the memory storing a list of selectively available banners;

a screen;

a processor in data communication with the data port, the memory, and the screen,

the processor programmed to (a) generate a user interface having a

plurality of pages, at least one of the pages being a home page, the home

page being a starting page for the user interface on the pump, (b) map one

of the banners from the list of selectively available banners to the home

page, and (c) display the banner in the home page.
